The Program Committee would like to share the current draft of the dashboard that Kate and her management team have been working on. A version of this draft will be presented at our July 22 meeting. They have identified many of the key programs that are currently active and have categorized them by geographic area and by focus area. The goal is to develop a document that communicates the broad range of projects to both internal and external audiences. This is a tough goal since the Alliance is involved in so many different types of projects throughout the watershed. In addition, this organizational chart can be used to help prioritize programs that support our strategic plan. One aspect of prioritizing is to understand the amount of effort that Alliance staff puts into programs and the cost/benefit balance of each program. Another aspect is to see where successful programs might be expanded into parts of the watershed where there is a need. We look forward to hearing comments on this draft by the Board.
